

QFin Analyst Copilot

1. The Problem

Small Teams. Big Markets. No Time.

Boutique funds and family offices are lean by design—1 or 2 people covering entire portfolios, sectors, and macro trends.

But the markets don't slow down to match that.

Every day:

- New SEBI circulars
- Earnings updates
- Global macro shifts
- Filings, news, sentiment, noise

You're expected to stay on top of everything—but without the research desk, the sector analyst, or the time.

That gap?

That's not just an operational issue—it's an edge killer. And it's growing.

Big funds have entire teams running these processes.

2. The Opportunity

India's Most Agile Capital Is Also the Most Underserved

The Indian investment ecosystem is divided:

- Retail tools are too shallow
- Institutional terminals are overkill and overpriced
- And the high-performance, high-leverage mid-layer—boutique PMSeS, AIFs, and family offices—is left with nothing truly built for them.

But what they don't have is time or capacity to track everything.

That's where we come in:

QFin isn't for everyone. It's built specifically for the professionals who have the judgment—but need the bandwidth.

3. The Solution

An AI-Powered Investing Copilot for Real Analysts

QFin Analyst Copilot doesn't give you signals. It gives you leverage.

We've built a system that mimics how an actual research team works—breaking down complex information into structured, actionable insight.

At the core is a modular team of AI agents—specialists for macro, earnings, filings, sentiment, and more—coordinated by a central reasoning engine.

So when something breaks in the market, you get the kind of structured response you'd expect from a 4-person desk. Except it's instant.

No dashboards. No noise.

Just crisp, contextual answers, delivered when and how you need them.

4. How It Works

A Research Team, Simulated in Software

Imagine this scenario:

“Crude oil is down 5%. What's the second-order impact on Indian refiners?”

Here's how QFin responds:

- **MacroAnalyst** evaluates global demand/supply dynamics and inflation risk
- **EarningsParser** digs through OMC financials to assess GRM exposure
- **SentimentAgent** filters media noise from actual market behavior

The reasoning engine ties it together.

Clean, backed by data, and ready to share with your team or IC.

It's not a black box. It's a research process—automated.

5. Technology & Moat

Structured Reasoning Is Our Edge

- **Causal Intelligence**: We don't just summarize—we explain.
- **Multi-Agent Architecture**: Every piece of analysis is run through domain-specific AI specialists

- **Narrative + Noise Detection:** We surface what matters, and ignore the hype
- **Scalable System:** Want to track 200 stocks instead of 20? Just ask.

We're not building a tool that *generates content*.

We're building one that *thinks like an analyst*—and gets better as it learns your context.

6. The Product

It Feels Like Having a Superhuman Junior Analyst

- Ask a question. Get a researched answer.
- No feeds, no alerts—just clean insights.
- Every insight is backed by a visible logic trail
- Export to PDF for quick IC sharing

7. Business Model

SaaS That Pays for Itself on Day One

- Annual B2B SaaS license
- Tiered pricing by seats and feature depth
- Built for teams that want to do more with less

We're not selling software.

We're embedding ourselves into the research stack.

9. The Vision

We're Building Infrastructure for Alpha

The next generation of outperformers in India won't win just on capital.

They'll win on insight, speed, and adaptability.

QFin is building the intelligence layer that powers them—starting with the boutiques, and growing from there.

Over time, we become the operating system for small, sharp teams who want to punch above their weight.
